LEAN PROPULSION

SIMPLY THE BEST SOLUTION
FOR ANY NAVAL SHIP

STADT LEAN PROPULSION

Ship owners need reliable vessels that are efficient to operate, year after year, in all seasons and weather conditions. Most importantly, the ship must have a reliable propulsion system with propellers and power systems that never fail. One that enables them to operate safely anywhere on the planet. As a vendor of conventional PWM propulsion systems for many years, we asked the question: “Can a new way of thinking also give us a new generation of propulsion systems that are prepared for tomorrow’s environmental challenges” ?

STADT has taken these challenges seriously, when developing the STADT LEAN DRIVE, based on a completely different architecture – a truly revolutionary design.

A lean propulsion system that is amazingly reliable, and also reduces service costs, weight, fuel, emission and waste, while freeing up space for cargo or passengers.

A sophisticated and silent system with stealth performance, extremely long lifetime, and excellent manoeuvrability.

The new drive technology has been awarded several times for its unique characteristics, and many ships are now sailing with the Lean Drive technology all over the world.

Hallvard Slettevoll
Director , CEO

BE PREPARED FOR THE CARBON-NEUTRAL FUTURE

No electromagnetic interference, EMI, due to sine wave operation

No acoustic switching noises

No harmonic voltage distortion, THD, on the ship

No transformers for the propulsion are needed

No electric losses in the drives at normal operation

High redundancy in all levels of the drive systems

Major reduction of space and weight for the drives

Minimal need for cooling of drives and its systems

No need for screened power cables and cable segregation

Rugged and very well proven technologies

MTBF and lifetime improved dramatically compared to competitors

Simplified technology , 80 % reduction in number of components

COMPLETE SILENCE

STADT LEAN PROPULSION - PATENTED TECHNOLOGY

Superior technology with Stealth performance. Ensures that the propeller never stops.

SUSTAINABLE, LEAN AND GREEN:

- Reduced fuel consumption, by up to 60 %
- Only 6 % losses in systems (AC Motors and alternators included.)
- Reduced NOx, SOx, BC and CO2 emission
- Reduced maintenance and high redundancy
- Slow steaming optimized and lower EEDI

LEAN DRIVE FOR ANY SIZE OF SHIPS

EVALUATION OF TODAY'S DIFFERENT DRIVE SOLUTIONS

| Lean Issues To Consider | STADT Lean Drive | 12 Pulse or 24 Pulse | AFE (Active Front End) |
|---|-------------------|----------------------|------------------------|
| Technology in AC drive | Sine Wave | PWM | PWM |
| No. of electric energy transformations | 0 | 4 | 4 or 5 |
| Power Train Losses | No, (negligible) | 6 % | 6 - 7 % |
| Cooling Type | Air is sufficient | Water | Water |
| Power Transformers Needed | No | Yes | Sometimes• - - - |
| Redundant Power Units | Standard | Special | Special |
| Harmonic Distortion (THD) | No | High | High |
| Electromagnetic Interference | No | High | High |
| Acoustic Switching Noise | No | Yes | Yes |
| Screened Power Cables needed | No | Yes | Yes |
| Depending on Harmonic Filters | No | Yes | Yes |
| Designed Economic Lifetime | 30 Years | 6 Years | 6 Years |
| Maintenance Requirement | Very Low | Frequent | Frequent |
| Onboard Crew Skills | Ordinary | Special | Special |
| MTBF (mean time between failures) | 7 Years | 1 Year | 1 Year |
| MTTR (mean time to repair) | 1 Hour | 1 Week | 1 Week |
| Spares Globally Available | Yes | No | No |
| Weight of Drive System | 100 % | 1100 % - 1400 % | 600 % - 1600 % |
| Size of Drive System | 100 % | 500 % - 600 % | 450 % - 700 % |
| All Voltage Class (220V-15kV) | Yes | No | No |
| Power Scalable | Yes | No | No |
| Regenerates Power to Grid | Yes | No | Yes |
| No. of Power Components in Line | 1 | 80 000 | 150 000 |
| Capacitors In Main Power Circuit | No | Yes | Yes |
| Explosion Risk in Drive | No | Yes | Yes |
| Propeller Pitch Configuration | CP | CP or FP | CP or FP |
| Financial Risk (Service cost, Off-hire) | Very Low | High | High |

TECHNOLOGY DIFFERENCES

STADT LEAN DRIVE TECHNOLOGY

SINE WAVE IS NOISE FREE,
NO EMI

COMPETITOR PWM DRIVE TECHNOLOGY

PWM CREATES A LOT OF
EMI

THE DIFFERENCE:

See our animated film at www.stadt.no

DISCOVER THE POWER OF SIMPLICITY

ELIMINATED:

- POWER DISTURBANCE THD ON GRID
- HARMONIC FILTERS
- 12 P - 24 P TRANSFORMER
- NOISE (PWM>EMC)
- EXPLOSION RISK (CAPACITORS)
- 80.000 COMPONENTS
- COOLING SYSTEMS
- 5-6 % WASTED HEAT
- COMPLEXITY

= LESS OFF-HIRE

STADT LEAN DRIVE

MORE:

- + REDUNDANCY IN DRIVE
- + STEALTH
- + HMS AND COMFORT (SILENCE)
- + REDUNDANCY, ALSO IN AC PROPULSION MOTORS
- + POWER TO PROPELLER

= BETTER PERFORMANCE

WHY WE USE CPP - CONTROLLABLE PITCH PROPELLER

THE PATENTED STADT LEAN DRIVE COMBINES PITCH AND RPM-CONTROL

- Significantly improved overall efficiency at varying load and/or varying speed conditions
- Better manoeuvrability (acceleration, breaking, crash stop)
- Better performance at reversing and in DP
- Better operational conditions for gear, shaft, and bearings, especially at low speed
- Forgiving for design errors
- Each blade may be changed independently if damaged, at sea
- Future-proof with regard to changes of use of the vessel, slow steaming, extensions, etc.
- Possibility for full feathering position, which is saving fuel when only running one propeller

STADT LEAN PROPULSION ARRANGEMENTS

SOME BASIC ARRANGEMENTS FOR FULL ELECTRIC PROPULSION, BASED ON DIESEL, LNG OR BIO FUELS

Twin screw PTI, CP

- 4 generators
- 4 electric motors
- 2 main switchboards

Triple screw, CP

- 4 generators
- 3 electric motors
- 2 main switchboards

Triple screw (2 Azipulls), CP

- 6 generators
- 3 electric motors
- 1 main switchboard with Bus-Tie

BATTERY OR FUEL CELL OPTIONS AVAILABLE IN ALL CONFIGURATIONS

Single screw Twin, CP

- 4 generators
- 2 electric motors
- 2 main switchboards

Double ended, CP

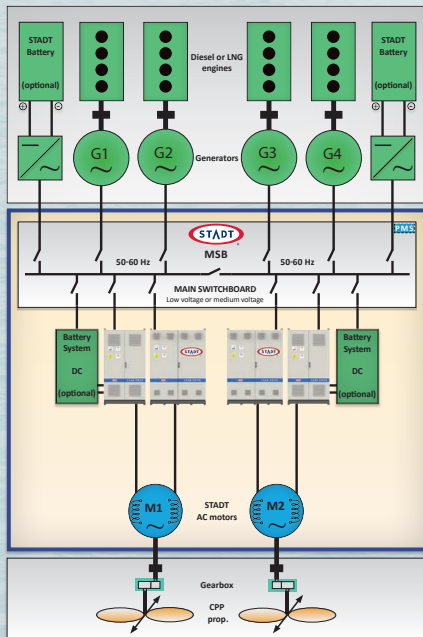

- 4 generators
- 2 electric motors
- 2 main switchboards

Twin screw (Azimuth or Voith), CP

- 4 generators
- 2 electric motors
- 2 main switchboards

STADT - YOUR SYSTEM INTEGRATOR

**LET US DESIGN YOUR NEW
SUSTAINABLE PROPULSION
SOLUTION**

THE STADT SCOPE

To create the Lean Propulsion Design, we offer a full product range as listed below.

STADT Lean Drives. Scalable in power up to 50 MW per propeller.

STADT AC motors, a broad range.

STADT main switchboards, MCC, low voltage and medium voltage.

STADT power generators, battery systems, shore-to-ship power solutions, distribution transformers, etc.

Power Management System(PMS), IAS, remote access from shore, Dynamic Positioning(DP).

SERVICES and EPC:

- Engineering of propulsion solutions
- Manufacturing and installation
- Commissioning
- Global Services

STADT - AWARDED TECHNOLOGY LEADER

The STADT Group was founded by Hallvard L. Slettevoll in 1985. We are located in the new and modern STADT Maritime Center in Gjerdsvik harbour.

For many years STADT has been a leading company in AC drive innovations. Long experience from development of motor drives has resulted in the patented STADT Lean Drive technology. This has huge advantages compared to traditional PWM-technology, since it is free from electric disturbances. The STADT Lean Drive is also a very efficient

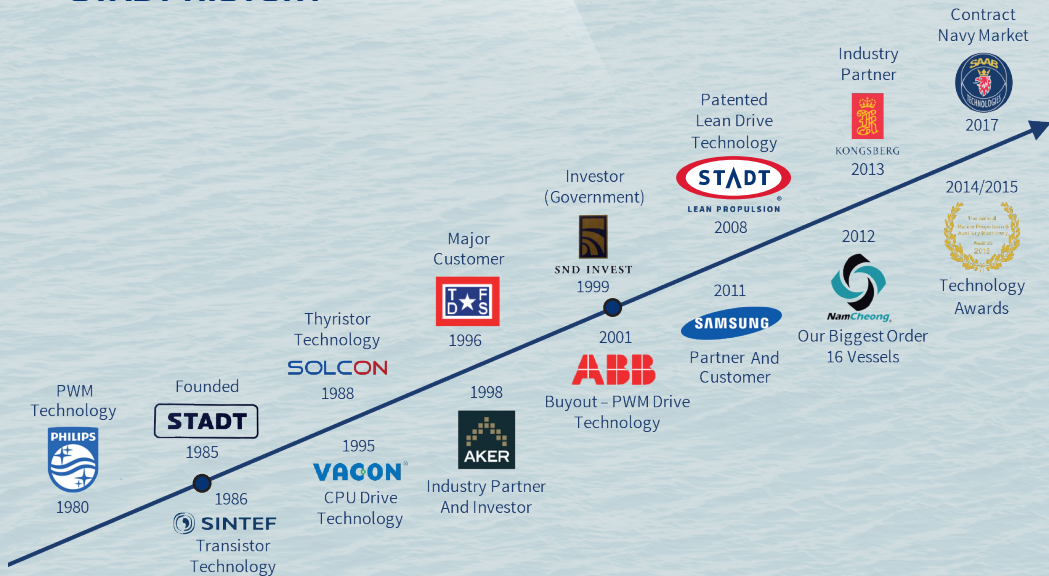

power drive system, bringing reliability up to a new standard.

The first STADT electric propulsion delivery went to the Norwegian coastguard K/V Tromsø in 1996.

The Lean Drive was patented in 2008, and launched to the first ship applications the same year. The new drive technology has been awarded several times for its unique characteristics, and many ships are now sailing with the Lean Drive technology all over the world.

STADT HISTORY

30 YEARS IN AC DRIVE DEVELOPEMENT

LEAN BRINGS YOU

+ SAFETY & RELIABILITY
+ VERY LONG LIFETIME

+ STEALTH & HSE
+ MORE CARGO CAPACITY

+ LESS EMISSION AND FUEL
+ COST EFFICIENCY
